A.I. Powered 30 Days Python Micro Course By Satish Dhawale ( Microsoft Certified Trainer )

# Prompt

Write a **Python program** that asks the user to **paste the folder path** containing multiple CSV files when the program runs. After pressing Enter, the program should **automatically read all CSV files from that folder** and **combine them into one Excel workbook**.

Each CSV file should be placed in a **separate sheet**, and the **sheet name must match the CSV file name**. The program should then **save the Excel workbook in the same folder** where the CSV files are located, with the name **“All_CSV_Converted_Into_Sheets.xlsx”**.
