Day - 29

GUI Based Automation using A.I

SkillCourse
E-learning Platform by Satish Dhawale

A.I. Powered 30 Days Python Micro Course By Satish Dhawale (Microsoft Certified Trainer)

Prompt

Write a Python program to create a Graphical User Interface (GUI) for dynamic data cleaning automation.

The GUI should allow the user to:

1. Browse and select a raw Excel file as input.
2. Display multiple data-cleaning options as checkboxes, including but not limited to:
3. Remove duplicate rows
4. Remove blank rows
5. Remove leading and trailing spaces from text columns only
6. Make Title Text style means First letter will be capital of each word for all Text columns

Browse and select an output folder location where the cleaned file will be saved.

1. The GUI should include the following buttons:
2. Clean Data: Applies the selected data-cleaning options to the chosen file and exports the cleaned Excel file to the selected output location.
3. Reset Paths: Clears the selected input file and output location.
4. Reset Checkboxes: Unchecks all selected data-cleaning options.

The program should apply only the selected cleaning operations and work dynamically for any Excel file chosen by the user. The cleaned file should be automatically saved in the chosen output folder.
